

Module 22 Behavior Extension

IBM InfoSphere Master Data Management Fundamentals

Unit objectives

After completing this unit, you should be able to:

- Create a new Behavior Extension using the MDM Workbench
- Understand the Metadata involved in MDM Behavior Extensions
- Understand how Behavior Extensions fit into the MDM Architecture

The Physical Behavior Extensions

Mechanism for extending the behavior of a Service

- e.g. Notification sent to client if client's account drops below min amount

Behavior extension can modify an existing service using:

- Proprietary business rules (for example, ILOG) or
- Custom written Java code

Can be implemented at various points of the Physical module

- Pre/Post Transaction controller
- Pre/Post Action components

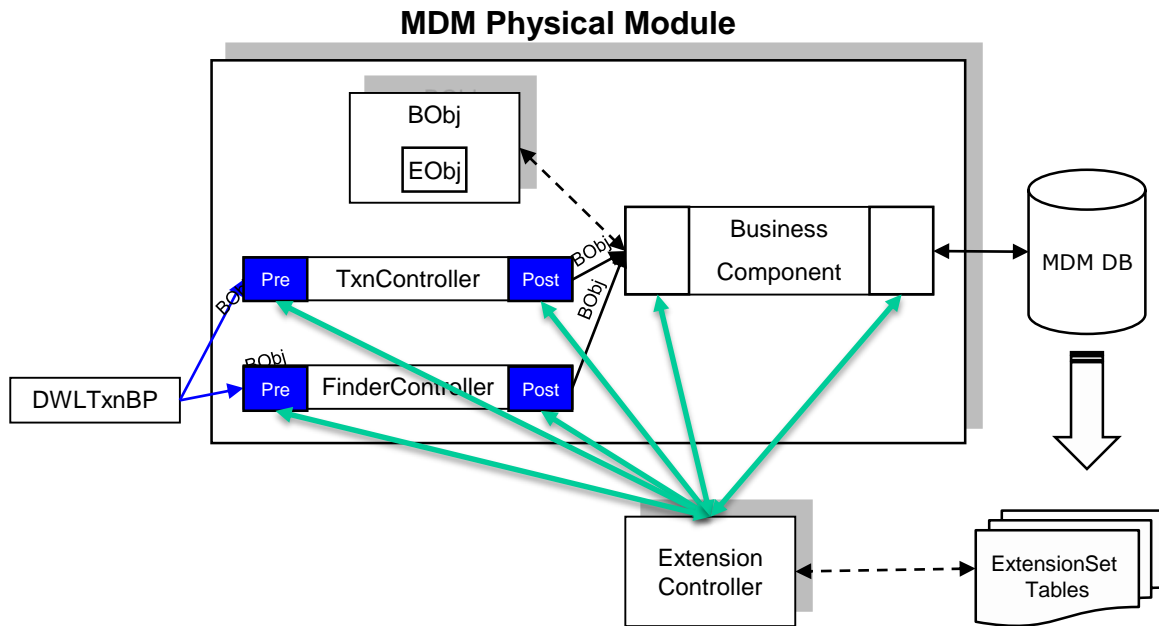

Behavior Extension Framework

- Extension Controller
 - Runs during extension points
 - Decides if extension should be run

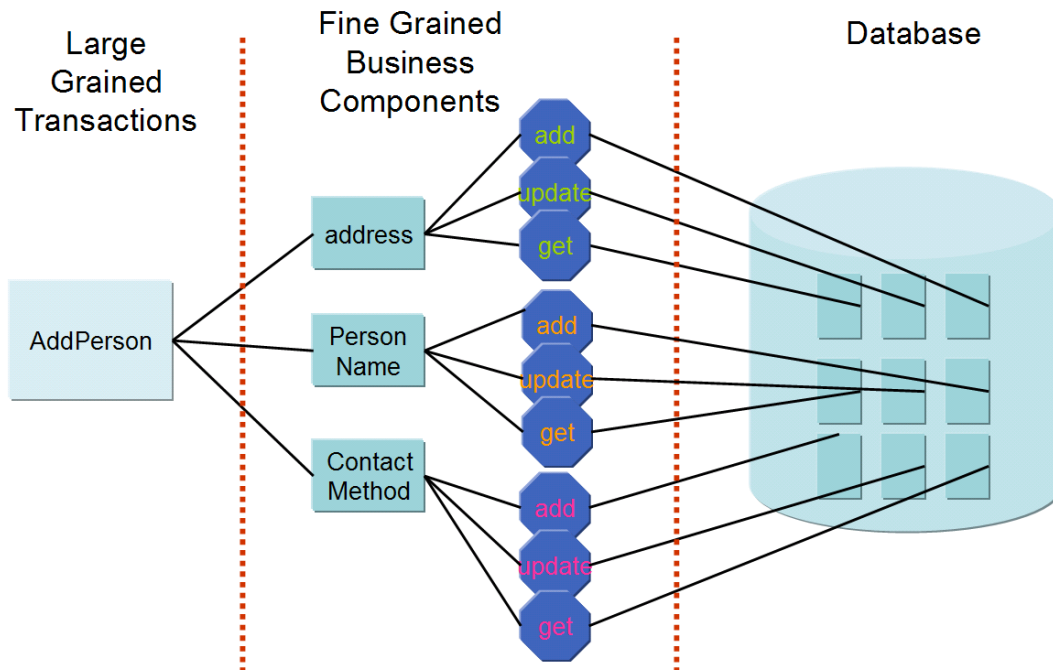

- Behavior Extension Class or Rule

- Extension Metadata
 - ExtensionSet, ExtSetCondval, CDConditionValTP
 - Identifies when Behavior Extension should be run

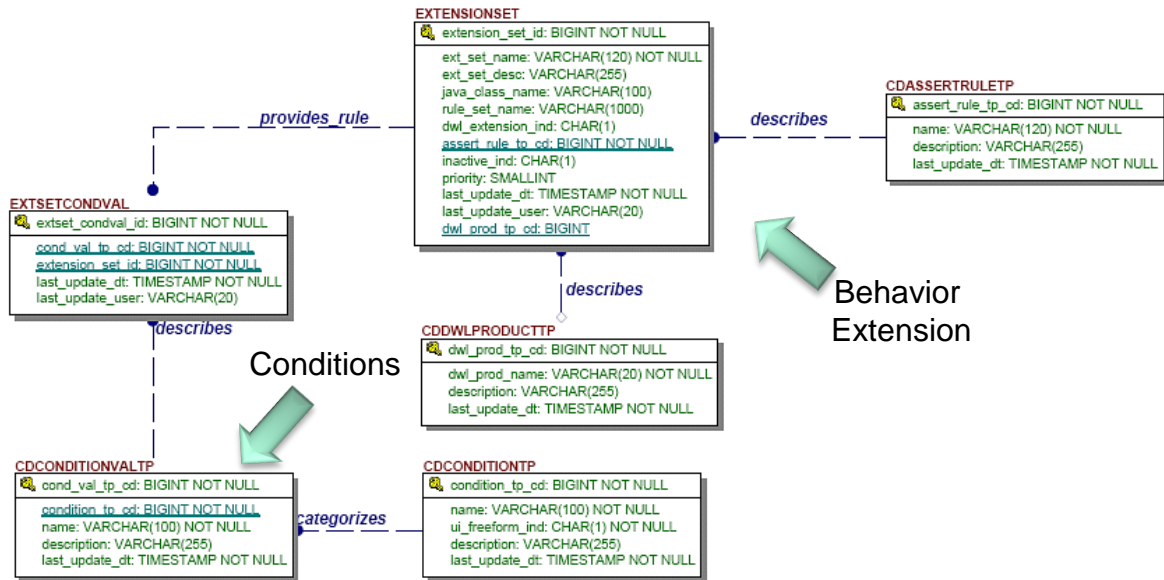

How it works: Behavior extensions

Controller versus Component

Extension framework data model (1 of 2)

Extension framework data model (2 of 2)

ExtensionSet

Extension_set_id	Ext_set_name	Dwl_prod_tp_cd
123456789	HighValueCustomer	1

ExtSetCondVal

extset_condval_id	extension_set_id	cond_val_tp_cd
55555555	123456789	21
55555556	123456789	9000006

CDProdTP

Dwl_prod_tp_cd	Dwl_prod_name
1	TCRM

CDConditionalTP

condition_tp_cd	name
3	Action Type
5	Trigger Type

cond_val_tp_cd	condition_tp_cd	cond_val_tp_cd
9000006	3	addContract
21	5	Post Action

CDConditionalvalTP

Behavior extension Java class

```
public class ExtensionBehavior extends ClientJavaExtensionSet {
```

- public void execute(ExtensionParameters params)
 - The *params* object contains the following objects:
 - **transactionType** (for example, addContract)
 - **TransactionCategoryType** (for example, Persistent)
 - **actionType** (for example, addPersonName)
 - **actionCategoryType** (for example, Persistent)
 - **triggerCategoryType** (for example, Post Transaction)
 - **DWLCControl**
 - **WorkingObjectHierarchy** (for example, TCRMPersonNameBObj)
 - **transactionObjectHierarchy** (for example, TCRMPersonBObj)
 - **additionalDataMap** (for example, parameters)
 - **extensionSetStatus**

Exercise introduction

- In this exercise, you will:
 - Create a new Behavior Extension for the addContractComponent and updateContractComponent
 - Test the new Behavior Extension
- * Make sure to check the Alert table to insure the Extension was invoked.

Unit summary

Having completed this unit, you should be able to:

- Create a new Behavior Extension using the InfoSphere MDM Workbench
- Understand the Metadata involved in InfoSphere MDM Behavior Extensions
- Understand how Behavior Extensions fit into the InfoSphere MDM Architecture
